

What do you think about Uganda's progress in bone marrow transplant?

**Dr Ruth Aceng,
Minister of Health**

When such a facility is available, post-transplant care within becomes easier. Government is planning to have another at the Uganda Cancer Institute to handle the many conditions that require bone marrow transplant.

**Dr Monica Musenero, Science
and Innovations minister**

Bone marrow transplant isn't a big task. The initiative is a gate opener for government to start gene therapy which will be a game changer for children born with sickle cell and those who need the service.

**Francisco Arezzo, President
Rotary International**

The approach of government partnering with the community, corporate institutions, individuals and international partners to raise money for an important public facility like the bone marrow transplant unit is good.

**Dr Cissy Kityo Mutuuluzza,
ED JCRC**

Bone marrow transplant can cure several diseases. Over 32 people have been trained in that area.
